

Your site has no URLs with a good page experience

Insufficient HTTPS coverage on your site

Good URLs ⓘ	Total impressions of good URLs ⓘ
0%	0

Critical issues prevent accurate counts of good URLs; the actual good URL percentage may be lower. [Learn more](#)

Help

Search Help

- HTTPS usage**
A page must be served over HTTPS to be eligible for Good page experience status. The Page Experience report **doesn't consider HTTPS criteria when calculating URL status**, only as a site-wide warning: if your site has a relatively high percentage of HTTP URLs, you will see a **Failing** warning in the Page Experience report. We don't yet have a report that shows details about HTTP vs HTTPS on your site, but [here are tips on how to locate your HTTP pages](#), and [here's a guide describing why HTTPS is important, and how to implement it on your site](#).
- Ad Experience**
Ad Experience rates whether a site uses advertising techniques that are distracting, interrupting, or otherwise **not conducive to a good user experience**. The Ad Experience evaluation affects an entire site, not a single page. If a site is
